

Technical visit n° 2 : Nexans Production Unit (Bourg en Bresse)

Friday, 19th June, 2015, departure from the congress center at 9 am, duration 6 hours, lunch included

Among the 12 Nexans cable production units in France, the site of Bourg en Bresse, active since the end of the 1950's, is totally dedicated to Medium Voltage and Low High Voltage cables (up to 150 kV).

After a general presentation of the Nexans group and product ranges produced on site, the visitors will have the opportunity to appreciate continuous processes commonly applied for cable production : from aluminum or copper rod drawing up to sheathing operations including the insulation process on the continuous catenary vulcanizing (CCV) lines. A general overview of the test equipments and installation will also be presented.
